

Innovation in Education of the Young Generation the Importance of Pedagogical Technologies

Ergasheva Gulchehra Rustamovna

Tashkent region Chirchik state pedagogy independent researcher of the institute

Abstract. The article provides information on the importance of innovative pedagogical technologies in the education of the younger generation, the organization of the educational process in educational institutions.

Keywords: pedagogy, education, young generation, innovative technology, pedagogue, creativity.

With the introduction of the concept of "pedagogy" in the scientific community, it was considered as a field of education and studied in this context. From the first years of independence, the content and essence of pedagogy in Uzbekistan, the theory, methods and techniques of education have undergone significant changes, and the national pedagogy of the republic has emerged. At the heart of any education system is the fate of future generations, as well as the interests of the state and the people. The personal qualities and professional competencies of today's youth play a key role in the realization of these interests. The human qualities and professionalism of the rising generation are directly related to the type, amount and quality of education provided to them today.

The main goal and driving force of the reforms in the republic is the creation of conditions and effective mechanisms for the realization of the interests of the individual, his harmonious development and well-being in all respects.

Modern teaching methods are widely used in education today. The use of modern teaching methods leads to high efficiency in the teaching process. The choice of teaching methods is based on the didactic function of each lesson.

While maintaining the traditional form of teaching, enriching it with methods that activate the activities of various learners will lead to an increase in the level of mastery of learners. To do this, the lesson process should be organized rationally, the teacher should increase the interest of students, their activity in the learning process is constantly encouraged, the teaching material should be divided into small pieces and open to their content. It requires the use of techniques such as attack, small group work, discussion, problem situation, reference text, project, role-playing games, and encouraging learners to perform practical exercises independently.

In modern education, it is becoming increasingly important not to give students ready-made knowledge, but to direct them to the independent acquisition of knowledge. In developing a teacher's creativity, it is important that he or she has the skills and competencies to take a creative approach to developing assignments for lectures, practical, seminar, and laboratory sessions. To do this, educators need to organize systematic, consistent practical action to develop their creativity.

Interactive education is organized on the basis of cooperation between the main participants of the teaching process - the teacher, the student and a group of students, lively discussions, the opportunity to exchange ideas, to think freely, to share their personal views. to express without

hesitation, to search for solutions in problematic situations, to create mutual closeness of students in the development of educational materials, mutual respect, understanding and support of the "teacher - student - student group" They are characterized by encouragement, sincerity, and spiritual unity.

The current development of science, engineering, manufacturing and technology defines the image of modern society. The most important feature of modern society is the fact that globalization is reflected in all its spheres.

Globalization requires rapid action, immediate acquisition, processing and effective implementation of the necessary information. Only those people who are knowledgeable in their field, highly qualified, rich in experience and skills will be able to act in this way.

Therefore, it is necessary to take into account this requirement of the time in the process of training in higher education institutions (HEIs).

Improving the intellectual potential of teachers of various specialties in retraining and advanced training courses for teachers of higher education institutions, enriching their worldview, introducing them to innovative educational technologies, new, innovative forms, methods and tools of teaching, qualities of professional competence and creativity in teachers It is important to get acquainted with the essence of talent. The training module "Innovative educational technologies" in the system of professional development allows teachers to be aware of the organizational, technical and didactic capabilities of modern innovative educational technologies, the use of innovative teaching technologies in educational practice, the qualities of competence and Consistent development of creative abilities not only creates conditions for the formation of skills, but also provides strengthening of skills for their effective use in professional activities.

The modernization of the education system is based on the need of the state and society for qualified personnel, and the individual for quality education. Pedagogical innovations characterize the consistent introduction of innovations into pedagogical activity.

The educational system and process are evolving according to the didactic potential of pedagogical innovations. The innovative activity of the teacher is a driving force, motivating and stimulating the pedagogical team, which guarantees the quality of the educational process. That is why every teacher should be able to consistently apply innovations in their work, fully understanding the essence of innovation.

We, all teachers and educators, must understand our duty and duty to our country - to serve our people at the highest level - in order to develop the spiritual education and intellectual potential of the young generation, which is our future.
